

and the second

with a limited number of people. We believe the direction of the station is of high caliber, but not all the station effort is carefully directed at priority targets. Under current personnel ceilings, there is little hope of increasing the manpower evailable for this critical effort. Thus, both Headquarters and the station must carefully place emphasis on assignment of priorities and upon selective execution of the activities to meet those priorities.

Organisation for Operations

5. The Mexico City Station approaches the classic type station in opportunities and in operations. It has high-level operations, unilateral operations, joint operations with the host government, and Soviet, Satellite, Cuban, and indigenous Communist Party operations. It has local collaborative liaison with other U.S. agencies: the State Department, the Federal Bureau of Investigation, the Immigration and Maturalisation Service and the military. To accomplish this wide range of tasks, the station is organized into the Soviet Branch, Cuban Branch, Satellite Branch, Covert Action Branch, Communist Party Branch, and an operational catch-all which is called the "Operational Support Branch." This latter branch is headed by a senior operations officer who has two assistants, but the branch in reality is an extension of the chief of station's personal clandestine capabilities, giving force and effect to that facet of the chief of station's personality as an operator. The deputy chief of station, in addition to his administrative duties, also personally handles the operations of three projects.

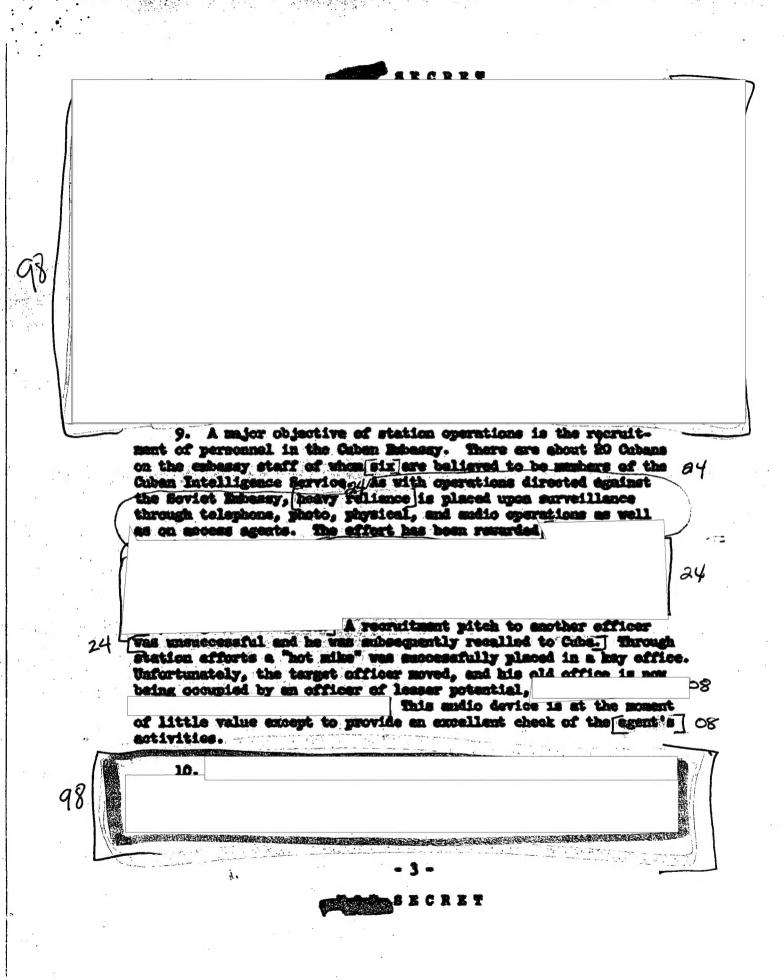

Cuban Operations

6. Mexico City is the only direct air link which Cuba has with the Western Hemisphere. It is the major transit point for all air travel to and from Cuba. Approximately 150 persons per week travel each way to and from Havana via Mexico City. This fact plays a prime role in shaping the station's operational activities. For example, over 10 per cent of the station's FI reporting on Cuban activities in the past year dealt with travel, both Cuban and non-Cuban, between Mexico City and Havana.

24

13-00000

II. The station's Cuben case officers must devote a substantial effort to responding to requests for support from other stations, chiefly ASAVE, with involvement in Cuben operations. Approximately 47 per cent of the station's cable traffic is concerned with Cuben operations. This volume alone is testimeny to the relative effort which must be devoted to the support of Cuben operations originating in other CIA stations. The Cuben case officers in Menico City feel that the requirements to keep abreest of day to day activities and to bandle the volume of paper left insufficient time for planning and development of an effective station operational program.

12. Operations are being conducted against the Cuban Rebeasy, and the results, while limited, are as satisfactory as may be expected in view of the target. Given Mexico City's strategic location astride the only direct air link to Cuba, Entre success should be schieved in recruiting agents in place in Cuba. This target has been assigned as Pricerty 1 to many Latin American countries and, if it is to be achieved at all, it is logical to expect that it will be done in Mexico City. To the extent possible, the Cuban case officers should be freed from the excessive support to other stations so they can commentate on this target. The Chief, WH Division, should direct other stations to excefully screen Cuban requirements on Mexico City, with a view toward reduction of such requirements.

It is recommended that:

No. 67

The Chief, WE Division:

a. Instruct the Chief of Station, Mexico City, to concentrate Cuban case officer efforts on developing agent assets resident in Cuba; and,

- 4

BECRET

nately high sum for the services of a outcut in proportion to the total cost of the proposed project. These points, taken together, constitute a valid basis for terminating operations in connection with LIMPY.

It is recommended that:

Bo. 70

The Chief, WH Division, disapprove the proposal of Chief of Station, Mexico, for Project LIMPF and direct him to terminate operations in connection therewith.

18. The station has a highly successful project directed at the rural and peasant targets. The principal agent is a

through whose efforts an extensive network of regional organisations have been established including youth groups, credit unions. agricultural co-ops and pessent unions.

It is recommended that:

No. 71

The Chief, WE Division, expand Project LINCOHE to include assistance in establishing a similar covert action project targeted on peasant groups in

Soviet Operations

19. Mexico is one of the four Latin American countries which maintain diplomatic relations with the Soviet Union thereby permitting the establishment of diplomatic installations in these

SECRET

Boviet activities in Mexico are not and in Canada by the Royal Canadian Mounted Police. Soviet personnel in Mexico thus have a freedom of movement which facilitates the conduct of clandestine operations targeted not only against the U.S. but also against other Latin American countries where there is no Soviet official presence. In addition, Mexico's long border with the U.S. has only minimum guards. Travel between the U.S. and Mexico is heavy and clandestine border crossing can be relatively simple. The Soviet Embassy in Mexico City, therefore, assumes more than the usual interest normally attached to similar Soviet in-

stellations as targets for U.S. intelligence. 20. Soviet operations conducted by the station are directed primarily at the personnel of the enbassy. At the present time, there are fifty-one officers etteched to the embassy of whom thirty-24 three have been identified as members of either the RGB or the GRU. It may be assumed that dependents and nonintelligence personnel, by performing various support functions, swell the total of those engaged in intelligence assignments. In its operations against the Soviets, the station is heavily dependent upon technical sollertion through telephone taps, photographic coverage of the embassy, physical surveillance, and hidden storophones. These operations 24 produce masses of information daily on the activities of the Soviet 24 personnel, such as telephone conversations with persons outside the embersy, Complete photographic records of the coming and going of 24 [all persons-Soviet and non-Soviet -- at the embassy, contacts of embassy personnel outside the embassy, etc. Because of the strict security indectrination of Soviet oversees personnel, the bulk of this information is lev-level and not disseminable as positive intelligence. Its chief value, aside from occasional items of intelli- 24 24 gance interest or operational import, derives from its compilation in depth to reveal patterns of activities and contacts, indicative of intelligence missions of essociations, and to disclose behaviorial characteristics of individual Soviets which might be symptometic of a vulnerability to recruitment. A sanity of the more block period of the the station has ligentified Soviet officers in the Nil and Gal, and gained an insight into their moins operandi in executing intelligence essignments. This is itself is of value from a counterintelligence point of view even though exploitation egainst Soviets has been limited. Also, by colleting the mass of collected data into personality reports on persons attached to the mebassy, the station hopes to be able to detect, foster, and eventuelly exploit any vulnerability to recruitment or detection-the

98

23. To evaluate properly the Soviet operations at Mexico
City, which rely heavily on expensive technical collection (devices)
would involve a basic expension of the whole concept of Soviet

City, which rely heavily an expensive technical collection devices would involve a basic effectment of the whole concept of Boviet operations, which is beyond the scope of this report of Boviet exploitation of material collected by technical means for the station, the primary objective of recruiting a Soviet national has not been achieved. Although the station's knowledge of Soviet intelligence activities centered about the embassy in the remark has been greatly sidened, it has led to little positive and

- 10 -

action to counter these activities as they might affect U.S. interests. While all the U.S.S.R. diplomatic missions are targets of vital importance for U.S. intelligence, the Soviet Embassy in Mexico City has special significance because of its preximity to the U.S. The Mexico City Station has attacked this target with determination and imagination. The Chief, SR Division, and his principal officers have commended highly the Soviet operations in Mexico City Station. The failure thus for to achieve the major objectives is testiment more to the impremebility of the terret then to a lack of resourcefulness in attacking it. Thus, we be-Lieve that until some new (methods, Coffuring greater promise of autimate excesses are developed) the present mode or attack should be continued at the present level.

Sh. Probably the most significant contribution which the station's operations against the Boviete in Nexteo City has made (16 to the U.S. security has been peripheral to the Agency's mission there. The embassy has long been a magnet for disaffected Americame who went for one reason or another to establish centact with the Soviets. Through its technical coverage of the Soviet Rebessy, 24 the station has been able to spot and, through subsequent action, to thwest a number of guch Americans, several of whom might have done untold damage to V.S. interests had they not been apprehended. 24 In this respect, the station works closely with the FBI. The Warren Commission's report on the assessination of President Remody made reference to information collected by station assets in connection with Oswald's activities in Maxico City.

25. The Estellite Branch, which is staffed by EE Division personnel, has been diverting such of its recent time from its EZ targets to a Although

there is no official government representation by the the

CHITTE OFFICE COM

has several people in Maxico City.

98

Technical Operations

42. The station is heavily committed in the technical field with a large audio operation run jointly with the Mexican Govern-24 ment (LIENVOY), as well as a Whilateral audio operation (LIFEAT). 24 The station has been imaginative in approaches to problems and willing to examine and experiment with the unusual. An example of this is the communications link between the station and the princi- 24 pel agent of LILIES, which will be discussed later.

43. The LIENVOY operation, previously mentioned in connection with Soviet operations, resulted from 24

operation was approved, providing

9,24

United States. This project is manned by selected Mexican Army 24 personnel, who are carefully screened end paid high incentive wages, 8 reducing their vulnerability to bribery. Other privileges add to the high esprit de corps essential to such an operation. The unit is managed by a career agent who transmits the take regularly to the station by clandestine means. This project has been fruitful in intelligence reports and has been of value in operational leads and in CE/CI information. The project also has a visual surveillance and a photo-surveillance capability. It was this project which provided data on the actions of Lea Earway Oswald in his famous visit to Maxico City.

Organisation for Administration

- 56. As in his direction of operations, the chief of station maintains a close personal hold upon the administrative life of his station. Such delegation as he makes does not include the granting of usual authority to a subordinate. For example, although the deputy has been delegated authority over the Registry, which will be discussed in detail later, in reality the chief continues daily activities which have a marked effect on the Registry. The station has a small, hard-working support scation, handling financial and property matters, and the usual fine communications section.
- 57. Murale and health were generally good, although for a city as modern as Mexico there is an unusual amount of abdominal disorder known in Mexico City as "Montesums's Revenge." The embassy furnishes edequate medicines, and medicines are available on the open market, although not always to be trusted. One incident was recently uncovered in which sulfer was consuled and sold as an antibiotic. Medical facilities have recently been improved by the opening of a new hospital which meets United States standards Physicians and surgeons are well trained and quite competent. Insofur as social life is concerned, morals in the station was excellent. Mexico City offers some of the finest social activities in the world, from honly-took to opera. There is local television, redio, and a great interest in music. There is a great deal of outdoor activity available - evinning, tennis, golf, exploration of ruins, and vast city purks. Some sports activities are comparatively expensive. Masherehip in country clubs is prohibitive except for persons on the diplomatic list.
- The One of the principal administrative problems facing the Chief of Station, Maxico City, is his Registry. The Registry bandles the station files which are more complete than in any other station in the Wil Division. There are more than 9,000 personality files and a vast accumulation of 3x5 card files (mostly biographic) which continue to increase at the rate of 23 linear inches per month. The station's present level of activity precludes any reduction in the card index file, but aperture cards

SECRET

are assisting in some reduction of the personality files. The Registry also handles the pouching. This task is also the largest in the WH Division, particularly in lateral pouching. On one occasion, at Headquarters' request, Mexico City handled the lateral pouching to 35 stations and bases of one document.

39. The problems of the Registry are compounded by the lack of training provided personnel assigned to the Registry. Personnel problems in the Registry are many and diversified. First of all, with the limited number of personnel and the great burden of work, a large smount of overtime has been required. Secondly, it has been difficult to get people to accept an assignment to the Mexico City Registry because the tasks are dull, tedious, and infinitely demanding of the individuals' time. The morale in this section was poor. We made several recommendations to the chief of station pointing out to him a conscientious effort must be made by all members of the station to reduce the workload in the Registry. In this connection, we suggested that individual case officers accept the responsibility for periodic cleaning of files which they used, and of which they have the most intimate knowledge. We further recommended that maximum discrimination be used in determining material which should be filed and that wherever possible the sheer bulk of the filing be reduced. We further recommended that overtime be made voluntarily whenever possible, but that in any event personnel be provided with a full weekend off from time to time.

60. The chief of the Registry is the only senior person assigned to the Registry and has no deputy or other person competent to take his place during his temporary absence. The chief at the time of our inspection had taken very little time off, including weekends in the two years of his tour. We feel that one of the positions in the Registry should be re-evaluated for possible upgrading to includes the duties of deputy chief of Registry.

It is recommended that:

No. 78

The Chief, WH Division, request the Director of Personnel to conduct a review of the function of Deputy Chief, Registry, Mexico City Station, to determine whether or not such a position should be established in an appropriate grade.

Gl. We found the Registry to be a controversial matter between Readquarters and the chief of station. The newly assigned deputy chief of station, who primerily had supervisory responsibility over the chief of Registry, was making a determined effort to reduce the workload in the Registry and to seek means of relying upon Readquarters' files rather than station files. We were told that on several occasions, Readquarters had reached the point of demanding that Maxico City reduce its Registry to a size comparable to other stations. Each time such a decision was reached, there would be a concurrent flap which would prove the value of Mexico City's shility to instantly retrieve information from their files. One of the most noteworthy of such flaps took place in Rovember 1963, when Mexico City's files brought forth detailed information on Lee Harvey Oswald's visits to the Osban and Soviet Rebassies in Mexico City.

technical operations LIEUVOI and LIFEAT produce voluntarily its technical operations LIEUVOI and LIFEAT produce voluntaries files. 34 Until some system is devised for this information to be quickly 34 digested and retrieved in Headquarters, we believe that there is no alternative to the present system Mexico City is employing. However, we believe that a determined effort must be in Headquarters for processing and retrieval of such information.

It is recommended that:

50. 79

The Chief, WH Division, in collaboration with the Chief, Records Integration Division, devise a system for reducing the volume of files held in Mexico City, while maintaining a capability for rapid retrieval from Headquarters of information essential to present and future operations in Mexico.

63. Mexico City is one of the great metropolises of the world and the beaming economy of Mexico is reflected in its bousing. It is difficult to find housing which compares exactly with United States housing because the Spanish tradition of servants' quarters, large space, and great entertainment are a basic way of life. However, in such a great city, there is naturally a large selection of housing within this limitation. There are good exactments, but such apartments usually are more expensive than allowances will permit for single occupancy. Housing for officers and families is generally quite good, not plentiful, but with predent selection, edequate housing can be found within reasonable range of the
